General remarks:

"(see Enclosure #)" refers to additional information appended to the report.

"(see appended table)" refers to a table appended to the report.

Throughout this report a point is used as the decimal separator.

Manufacturer's Declaration per Sub Clause 4.2.5 of IECEE 02:

Not Applicable

The application for obtaining a CB Test Certificate includes more than one factory and a declaration from the Manufacturer stating that the sample(s) submitted for evaluation is (are) representative of the products from each factory has been provided

When differences exist, they shall be identified in the General Product Information section.

GENERAL PRODUCT INFORMATION:

Report Summary

All applicable tests according to the referenced standard(s) have been carried out.

Product Description

The product is AC/DC switch mode power supply for building-in and mounting on DIN rail. It has output with adjustable voltage, passive relay signal circuit. Connector X2 may be used for external or remote control of the unit.

Model Differences

Suffix '-xyz' is optional and denotes customer-specific variant (like fixed voltage or no LED), and is deemed not safety relevant.

Additional Information

Product Maximum Normal load defined as full load according to output ratings up to 50 °C ambient and with linear de-rating above 50 °C and up to 70 °C ambient. See Technical Considerations. Product additionally tested for intermittent operation at the following condition: 60 A for 4 seconds and 22.8 A for 7.4 seconds with rising edge min. 50ms.

External connector provided with 2 jumpers between pins 1-2 (CB OFF) and 5-6 (CNT on).

Overall dimensions [WxHxD] approximately: 110 x 123 x 139 mm.

Load conditions (output voltage and current) when referred as A through F are defined as follows:

- A at ambient = 50 °C, continuous load: 24 Vdc, 40 A
- B at ambient = 50 °C, continuous load: 28 Vdc, 34.3 A
- C at ambient = 70 °, de-rated continuous load: 24 Vdc, 30 A
- D at ambient = 70°, de-rated continuous load: 28 Vdc, 25.725 A
- E at ambient = 60 °, de-rated continuous load: 24 Vdc, 35 A
- F at ambient 50 °C, Intermittent operation, 4 s high/7.4s low: 24 Vdc, 60/22.8 A

All tests have been conducted on samples with T2 construction employing S-238-HT-006 wire with 3 wrapped layers. Manufacturer has replaced TIW by 3-layer extruded wire type TXXL210/38FXXX-2, Rubadue with same electrical parameters considering tolerances. The overall dimension of T2 has not been changed. Based on test results in his evaluation and details of separate IEC certification of the wire itself and UL certified Insulating System new construction of T2 transformer is deemed not affecting previous test results and therefore all tests are considered representative for revised construction.

Technical Considerations

The product was submitted and evaluated for use at the maximum ambient temperature (Tma) permitted by the manufacturer's specification of: 50 °C with full load, 70 °C with linear de-rating

above 50 °C down to 75% of full load

- The product is intended for use on the following power systems: TT, TN, IT
- The equipment disconnect device is considered to be: provided in end product
- The product was investigated to the following additional standards: EN 60950-1:2006 + A11:2009 + A1:2010 + A12:2011 + A2:2013 (which includes all European national differences, including those specified in this test report).
- The following were investigated as part of the protective earthing/bonding: Printed wiring board trace (refer to Enclosure - Schematics + PWB for layouts)
- LEDs provided in the product are considered low power devices: Yes
- The following scope limitations apply to this test report and additional evaluation and/or tests may be required when submitting this CB Report to a National Certification Body (NCB) to obtain a national mark: no EMC tests nor evaluation to EMC Directive 2004/108/EC and 2014/30/EU no evaluation to RoHS Directives 2002/95/EC, 2011/65/EU and (EU) 2016/585 only English version of markings/instructions provided and reviewed --
- The Clearances and Creepage Distances have additionally been assessed for suitability up to 6 000 m elevation: multiplying factor of 1.7 from Table A.2 of IEC 60664-1 was considered. --

Engineering Conditions of Acceptability

When installed in an end-product, consideration must be given to the following:

- The following Production-Line tests are conducted for this product: Electric Strength, Earthing Continuity
- The end-product Electric Strength Test is to be based upon a maximum working voltage of: Primary-SELV: 370 Vrms, 600 Vpk, Primary-Earthed Dead Metal: 404 Vrms, 512 Vpk
- The following secondary output circuits are SELV: all output terminals
- The following secondary output circuits are at hazardous energy levels: power output terminal
- The following output terminals were referenced to earth during performance testing:,
- The power supply terminals and/or connectors are: Suitable for field wiring
- The maximum investigated branch circuit rating is: 20 A
- The investigated Pollution Degree is: 2
- Proper bonding to the end-product main protective earthing termination is: Required
- An investigation of the protective bonding terminals has: Been conducted
- The following input terminals/connectors must be connected to the end-product supply neutral: terminal XFIL1 pin 2
- The following magnetic devices (e.g. transformers or inductor) are provided with an OBJY2 insulation system with the indicated rating greater than Class A (105°C): T2 (Class F/155 °C); T13 (class B/130 °C); L7, L8 (class F/155 °C)
- The following end-product enclosures are required: Mechanical, Fire, Electrical
- The following components require special consideration during end-product Thermal (Heating) tests due to the indicated maximum temperature measurements during component-level testing: metal housing/chassis (96.1 °C)
- Product tested for intermittent operation and adequate marking shall be provided in end-product if applicable. --
- Product provided with Fuse F1, rated 250 Vac, 10A. Adjacent marking or cross-reference may be considered necessary in end-product. --
